## **Asian Journal of Pharmacognosy**

*Christophe Wiart*

*School of Pharmacy, Faculty of Science, University of Nottingham Malaysia Campus, 43500, Selangor, Malaysia*

This issue offers an exciting set of data in the field of Asian pharmacognosy covering various aspects of drug discovery from medicinal plants in Southeast Asia. Many of the plants listed in this issue have never been studied for pharmacology and we hope that this issue, like all others will contribute to the development of leads for the treatment of major human illnesses. The current ecological situations of the world and daily disappearance of species on this planet due to corporate greed will result in all probability in a global biological tsunami. Our journal serves as reference of lost traditional knowledge and medicinal plant properties. Let us hope that future generations will be closer to Nature and will display more common sense.
